

**POLLUTION PREVENTION AND CONTROL ACT 1999
 ENVIRONMENTAL PERMITTING (ENGLAND AND WALES) REGULATIONS 2007**

PERMIT OF PROCESS

THIS IS TO CERTIFY THAT the operation of mobile crushing and screening plant

at: **NEWLINE MIDLANDS LIMITED,
 633 MELTON ROAD, THURMASTON, LEICESTERSHIRE**

has been duly permitted in accordance with Regulation 13(1) of the Environmental Permitting (England and Wales) Regulations 2007 subject to the conditions outlined in this document.

**Name of Operator: NEWLINE MIDLANDS LIMITED
 Registered Office 633 MELTON ROAD, THURMASTON, LEICESTERSHIRE**

This Permit shall apply only to the premises occupied by the applicant, as specified and described in the Application for Permit submitted to the Charnwood Borough Council. This Permit, consisting of eleven pages, shall be subject to replacement, variation or amendment, as may be considered appropriate by the Charnwood Borough Council at any time, according to provisions of Regulations, 18, 20, and 34 of the Environmental Permitting (England and Wales) Regulations 2007.

The conditions contained herein shall apply from the date of the Permit unless otherwise stated.

Signed on behalf of Charnwood borough Council

.....
 Beverley Green, Specialist Environmental Health Officer
 (the delegated officer for the purpose)

Dated 4 February 2010

Counter-signed.....

Directorate of Strategic Housing and Health, Environmental Protection, Southfields, Southfield Road Loughborough LE11 2TX

Introductory note

This introductory note does not form a part of the permit

The following Permit is issued under Regulation 13(1) of the Environmental Permitting (England and Wales) Regulations 2007 (S.I 2007/ 3538), as amended, (“the EP Regulations”) to operate an installation carrying out one or more of the activities listed in Part 2 of Schedule 1 of the EP Regulations, to the extent authorised by the Permit:

Section 3.5, Part B

"Any activity of crushing, grinding and other size reduction of bricks, tiles, concrete or other mineral products by machinery designed for that purpose"

The responsibility you have under legislation for Health, Safety and Welfare in the workplace remains in force. In addition, the Permit does not relieve you of your obligations to obtain planning permission, hazardous substances consent, discharge consent from the Environment Agency, Building Regulations approval, or some Waste Disposal Licences.

Note that the Permit requires the submission of certain information to the Local Authority (LA). In addition, the LA has the power to seek further information at any time under Regulation 60(2) EP Regulations provided that it acts reasonably.

Public Registers

Considerable information relating to Permits including the Application is available on public registers in accordance with Requirement 46(1) EP Regulations. Certain information may be withheld from public registers where it is commercially confidential or contrary to national security.

Variations to the Permit

This Permit may be varied in the future (by the LA serving a Variation Notice on the Operator). If the Operator itself wants any of the Conditions of the Permit to be changed, it must submit a formal Application. The Status Log within the Introductory Note to any such Variation Notice will include summary details of this Permit, variations issued up to that point in time and state whether a consolidated version of the Permit has been issued.

PERMIT 060

Surrender of the Permit

Where the Operator intends to cease the operation of an installation (in whole or in part) The LA should be informed in writing, such notification must include the information specified in Regulation 24 or Regulation 25 and Part I of Schedule 5 of the EP Regulations.

Transfer of the Permit or part of the Permit

Before the Permit can be wholly or partially transferred to another person, an Application to transfer the Permit has to be made jointly by the existing and proposed holders. A transfer will be allowed unless the LA considers that the proposed holder will not be the person who will have control over the operation of the installation or will not comply with the conditions of the transferred Permit.

Talking to us

Please quote the Permit Number if you contact Charnwood Borough Council about this Permit. To give a Notification under Condition 7 the Operator should use the telephone number 01509 634636 or any other number notified in writing to the Operator by Charnwood Borough Council for that purpose.

Status Log

Process Description

The crushing plant permitted for operation by this permit is a diesel powered Extec/Sandvick QJ 240 Crusher, Serial Number 1886SW10221. Operating from the premises located at 633 Melton Road Thurmaston shown in Appendix I for use in demolition sites and site clearance projects within a 50-mile radius of Thurmaston.

PERMIT 060

The separation and crushing operation of brick, tile and concrete debris comprises two separate stages:-

Stage 1

Combustible material is separated and removed. Steel reinforcing is segregated and concrete is reduced in size. This procedure is carried out by 360 excavators fitted with hydraulic cracking attachments. The concrete is cracked to around 200mm and approximately 90% of the reinforcing bar extracted.

The size reduced materials are re-handled by tracked loader and put in a stocking area prior to crushing.

Stage 2

The stocked material is crushed to a uniform 100mm. The mobile crushing plant is powered by a diesel engine mounted within the chassis. The feed process is controlled by a primary feed hopper and vibrating plate feeder. Material is loaded into the hopper by a 360° excavator and/or tracked loader. The feed/crushing rate is under operator control via the plate feeder.

The material passes through the crusher and down to a discharge stocking conveyor where it is removed to stock.

Plant Detail

The primary crushing unit consists of a feed hopper incorporating a vibrating feeder with an integral grid consisting of 'T' section bars (known as 'grizzly') which allows material under certain size (fines) to by-pass the jaws and fall either onto the conveyor belt which receives crushed material or, when fitted, onto a side conveyor which removes the fines to a separate stockpile. The twin contra-rotating vibrating motors impart a linear movement to the feeder, causing the material loaded into the hopper to move towards the jaw crusher.

The jaw crusher consists of two jaws, one stationary and the other moving by reciprocating to set distance with respect to the stationary jaw. Material entering the jaws is crushed by the action of the moving jaw until it is of a size which is smaller than the set distance. The crushed material falls onto a conveyor belt which delivers material forward of the machine. The section of the conveyor belt beneath the jaws is enclosed on three sides. Crushed material is carried to the end of the conveyor and falls by gravity onto the stockpile.

Principle Emissions

The key emissions that constitute pollution are particulate matter (cement dust, aggregate dust) arising from the following activities:

1. crushing and grinding,
2. screening,
3. loading and unloading,
4. on-site transfer of dusty materials,
5. stockpiles,
6. roadways, including haul roads.

End of Introductory Note.

PERMIT 060

The above named company is permitted to operate a mobile crushing and screening plant subject to compliance with the following conditions:

Permit Conditions**Standard Conditions**

1. If the operator proposes to make a change in operation of the mobile plant he shall, at least 14 days before making the change, notify Charnwood Borough Council in writing. The notification must contain a description of the proposed change in operation. It is not necessary to make such a notification if an application to vary this permit has been made and the application contains a description of the proposed change. In this condition 'change of operation' means a change in the nature, type or functioning, or an extension, of the plant which may have consequences for the environment.
2. The best available techniques shall be used to prevent or, where that is not practicable, reduce emissions from the mobile plant which is not regulated by any other condition of this permit

Emission Limits, monitoring and other provisions

3. There shall be no abnormal visible dust emissions from the process or fallout of dust beyond the site boundary.
4. A visual assessment of the dust emissions from the crusher, ancillary plant, stockpiles and storage area for crushed materials shall be made on start up and on at least two more occasions each day, to assess compliance with condition 3. Where visible emissions of dust from any source are observed, the process shall cease until the cause has been investigated and the problem rectified.
5. The results of all assessments shall be recorded in a log book. The record shall be clearly legible and include the time and date, the result, the name of the person undertaking the inspection or assessment. In the case of non-compliant inspection results or emissions being assessed, the cause, the remedial action taken and the time the compliant operation is restored shall also be recorded. The log book shall be available for inspection at the site occupied by the process by any authorised officer of Charnwood Borough Council or the local authority of the area in which the process is situated.

PERMIT 060

6. Records relating to the previous seven operating days shall be kept available on site. All records of inspection shall be held for a minimum of two years at the company's principal place of business and shall be kept available for examination by an authorised officer of Charnwood Borough Council. Any historical records kept off-site shall be made available for inspection with one working week of any request by any authorised officer of Charnwood Borough Council.
7. Any malfunction or breakdown leading to abnormal emissions shall be dealt with promptly, and the process operation immediately adjusted to minimise emissions until normal operations can be restored. All such malfunctions shall be promptly recorded in the log book required under condition 5 detailing, the event and actions taken, and Charnwood Borough Council and the local enforcing authority shall be informed without delay if the local community is likely to be affected.
8. If in the opinion of an authorised officer of Charnwood Borough Council or the local enforcing authority there is evidence of airborne dust being deposited outside the process boundary, corrective action shall be taken without delay. If the source of the emission is uncertain the operator shall undertake an inspection and/or monitoring to identify the source. The monitoring shall be by a British Standard method or by a method agreed between the operator and Charnwood Borough Council.

Process Controls**Stockpiles**

9. The provisions of conditions 9 to 29 inclusive shall be complied with where the activities referred to are carried out by the same person who is permitted to operate the mobile plant.
10. Stockpiles of raw materials and products shall be held in such a way as to minimise the emission of wind-borne dust during loading to and from the stockpiles and during construction and management of stockpiles. Where such emissions occur the stockpile or stockpiles giving rise to emissions shall be "capped off", that is the surface conditioned with water or covered.
11. Stockpiles shall be suitably profiled and wherever possible shall be situated in sheltered areas of the site.

PERMIT 060

-
12. The post-processed material stockpile being fed by the discharge conveyor shall, by careful management of material transfer and stockpiling, be maintained at a height which is as close to the end of the conveyor as possible in order to minimise the drop height. On start-up, prior to the build-up of the stockpile to this level, attention shall be paid to water conditioning to minimise emissions.
13. The loading of dump trucks, excavators and front end loaders shall be carried out such that the drop height of material is minimised when loading to and from stockpiles. This loading shall also be carried out in such a manner as to minimise wind entrainment of dust.
14. No material shall be stored in the open except for:
- a) material that has been screened to remove material 3mm and under;
 - b) sand;
 - c) scalping;
 - d) material used for road sub-bases (commonly known as “MOT material” or “type 1” or “type 2” material) that has been conditioned before deposition;
 - e) crusher run material that has been conditioned before deposition;
 - f) Material under 3mm that is in excess of the internal storage capacity (the internal storage capacity having been previously agreed by the Local Authority).

Crusher Process

15. The Extec/Sandvik QJ 240 Crusher shall be provided with its own water suppression supply to spray material which is fed into the hopper and crushed. Water suppression shall be provided over the crusher entry and conveyor discharge point, and shall be used when necessary to minimise dust emissions. Where it is necessary to use water to suppress dust, a constant supply shall be available in all climatic conditions. If water supply or pressure is found to be insufficient to allow the dust suppression equipment to work effectively, then steps must be taken to supplement the supply to enable the equipment to work effectively or the process shall not be operated.
16. Where water is used as a method of dust suppression, an adequate supply of water shall be provided and all water suppression systems shall be protected from frost.
17. Where no water is available, the crusher and all transfer points shall be contained as far as possible.

Conveyors

PERMIT 060

18. Conveyors shall be of sufficient capacity to handle maximum loads without spillage.
19. The conveyor shall be fitted with means for keeping the belt clean.

Loading/unloading

20. The loading of road vehicles shall be carried out such that the drop height of crushed material is minimised and in such a general manner as to minimise the generation of airborne dust. Where emissions are seen to occur, the crushed material shall be suitably wetted prior to loading. As soon as possible after loading the vehicle shall be sheeted or otherwise totally enclosed. This shall not apply to the loading of crushed material which is greater than 75mm.

Transportation

21. Internal road transport of processed material likely to generate dust shall be carried out in closed tankers or sheeted vehicles, or the material conditioned with water.
22. Roadways in normal use and any other area where there is regular movement of vehicles shall have a consolidated surface capable of being cleaned. They shall be kept clean in order to prevent or minimise dust emissions. They shall also be kept in good repair.

Management

23. The crusher unit shall be operated and maintained in accordance with the manufacturer's instructions to ensure effective control of emissions. Spares and consumables, particularly for those items subject to continual wear shall be held on site, or shall be available at short notice from guaranteed local suppliers or the original equipment manufacturer, so that plant breakdowns or malfunctions which may lead to abnormal emissions can be rectified rapidly.

Training

24. All persons operating the crusher shall be made aware of the conditions of this Permit and receive training and instruction in relation to their duties to control the process and emissions to air. Particular emphasis should be given to training for start-up, shut-down and abnormal conditions and systems of work shall clearly identify lines of responsibility.

PERMIT 060

25. The operator shall maintain a statement of training requirements for each operational post and keep a record of the training received by each person whose actions may have an impact on the environment. These records shall be retained and made available for examination by officers of Charnwood Borough Council.

Maintenance

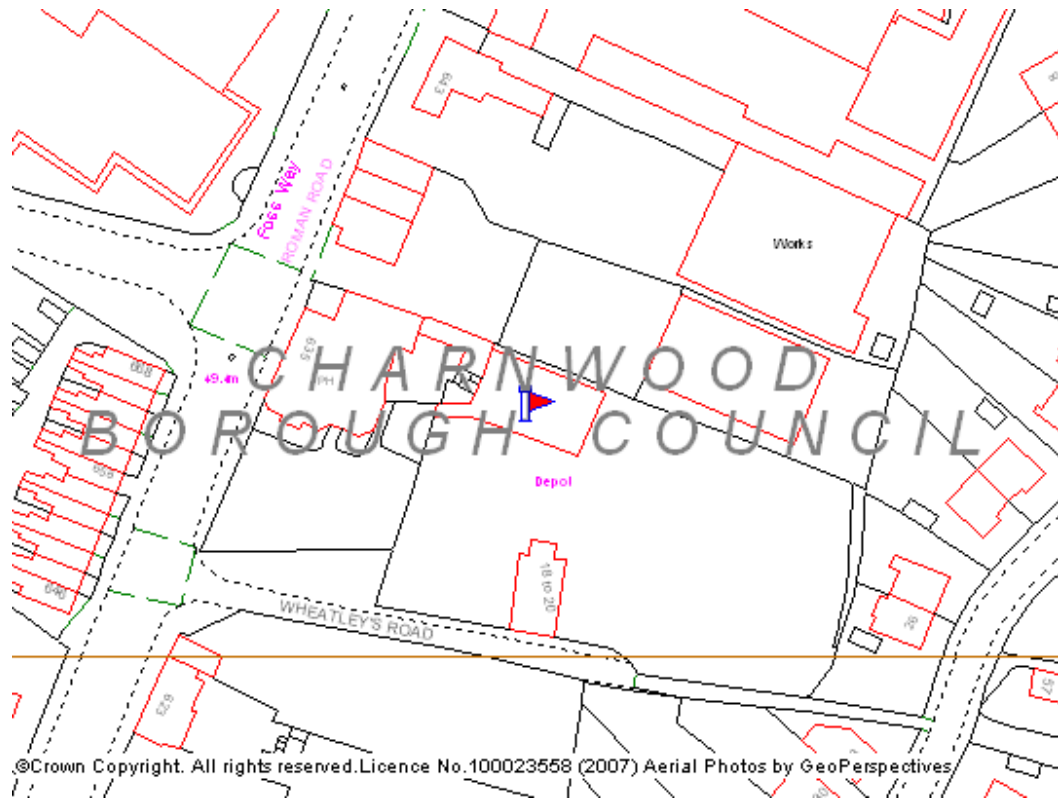

26. The operator shall prepare and produce a written maintenance schedule with respect to pollution control equipment. A copy of this schedule shall be provided to Charnwood Borough Council.
27. A record of such maintenance should be made available for inspection, and a summary of maintenance carried out in the previous 12 months should be sent by 31 January, once a year by the operator to Charnwood Borough Council.

General

28. The Environmental Protection Section of Charnwood Borough Council shall be notified in writing within seven days, if possible, and in no case less than three whole days, prior to the process being moved to any new location. Such notification shall include details of the intended new location, the name of the local enforcing authority responsible and the serial number of the crushing unit to be used in the process.
29. The Pollution Control or Environmental Health Department of the area to where the crusher is to be moved shall be notified in writing within seven days if possible, and in no case less than three whole days, prior to the process being moved into the area. Such notification shall include details of the intended new location, contact details of Charnwood Borough Council responsible for issuing the permit and the serial number of the crushing unit to be used.
30. A copy of this Permit shall be held with the crusher at the current operating site and made available for inspection by an authorised officer of the local enforcing authority.
31. The operator shall maintain the plant in a clean state in order to avoid any material being deposited on the public highway during transportation between operating locations.
32. The crusher unit shall be sited as far from residential dwellings as reasonably practicable.

End of Conditions

Appendix I – Site Location

Explanatory Note

This note does not comprise part of Permit Reference No. 060 but contains guidance for Operators receiving a permit.

1. Anyone who is aggrieved by the conditions attached to a Permit can appeal to the Secretary of State. Appeals must be sent within 6 months from the date of the permit (normally the date on the bottom of the permit).
2. Appeals must be made in accordance with the requirements of Regulation 31 and Schedule 6 of the EP Regulations and should be addressed as follows:

The Planning Inspectorate
Environment Team, Major and Specialist Casework
Room 4/04 Kite Wing
Temple Quay House,
2 The Square,
Temple Quay,
Bristol, BS1 6PN

3. An appeal brought under Regulation 31(b)(1) in relation to the conditions in a permit will not suspend the effect of the conditions appealed against: the conditions must still be complied with.
4. There are no forms or charges for appealing. However for an appeal to be valid, appellants are legally required to provide information as detailed in paragraphs 2(1) and (2) of Schedule 6 of the EP Regulations., namely:
 - I. A statement of the grounds of appeal
 - II. A copy of any relevant permit
 - III. A copy of any relevant correspondence between the appellant and the regulator
 - IV. A statement indicating whether the appellant wishes the appeal to be in the form of a hearing or dealt with by way of written representations.

At the same time, the notice of appeal and documents (I) and (IV) must be sent to the Council.

5. In determining an appeal against one or more conditions, the Regulations allow the Inspector or Secretary of State to affirm or quash conditions or to add new conditions.
